

CHRIS McNOSKY

FULL STACK WEB DEVELOPER

AI EVALUATION, AGENT RELIABILITY & TECHNICAL PROGRAM MANAGEMENT

Dallas-Fort Worth, TX | 817-360-0687 | cmcnosky@gmail.com

linkedin.com/in/chris-mcnosky | github.com/cmcnosky | cmcnosky.github.io/why-hire

PROFESSIONAL SUMMARY

Full stack web developer and AI evaluation leader who turns ambiguous requirements into working systems, testable acceptance criteria, adversarial evaluations, reproducible evidence, and clear release decisions. Owns scope, architecture, quality gates, and final judgment. Earlier experience spans purchasing, vendor documentation, regulated operations, and deadline-driven coordination.

SELECTED IMPACT

- **Co-created and released Read Shruti, a full stack author website.** Built with Next.js/React and TypeScript, with Cloudflare Worker API routes, D1 storage, search metadata, three book pages and retailer links, and aggregate page-view and retailer-click analytics. Project: readshruti.com
- **Delivered a working, tested Rust implementation for Tokio's conditional select! branches.** Directed the contribution and regression coverage; upstream CI passed. A 450-invocation compiler study found no unexpected results, with one final select! body at 64 cfg-gated branches on Rust 1.88 and 1.98. Implementation and tests: Tokio PR #8374.
- **Held a change out of integration despite 1,336 passing tests.** In my evaluation lab, a second, separately prompted adversarial review found two paths where acceptance logic could approve spec-violating behavior; correction and retest were required before integration.
- **Improved evaluator reliability while preserving the failure record.** When Stinger mislabeled a correct refusal, preserved the original evidence, specified the correct classification, and required regression coverage for six independently worded refusals before accepting the correction.

PROFESSIONAL EXPERIENCE

Founder / AI Evaluation & Governance - NoFuckery AI | 2026-Present

- Translate ambiguous objectives into specifications, acceptance criteria, failure modes, and clear proceed, correct, hold, or stop decisions.
- Direct implementation and separate review across Python and Rust systems; inspect diffs, logs, tests, reports, and source material before approval.
- Build and publish evidence-led systems and analyses, including Stinger and the Tokio contribution; preserve contradictory evidence and require correction plus regression testing.

Founder / Sole Operator - High Pie | October 2022-Present

- Own supplier selection, sourcing, production, pricing, inventory, regulated-product compliance documentation, fulfillment, and customer issue resolution for a hemp-product business.

Purchasing Coordinator - Lennar | May 2018-October 2022

- Reviewed bids, contracts, budgets, and vendor records; reconciled cost and documentation discrepancies before field execution.
- Coordinated vendors, trades, and internal stakeholders against construction deadlines across cost, quality, schedule, documentation, and compliance.

CORE SKILLS

AI evaluation and agent reliability: adversarial testing; evaluation design; acceptance criteria; rubric and scorecard design; completion-claim verification; failure classification; correction and regression gates; agent red teaming

Technical program management and quality operations: requirements definition; test strategy; root-cause analysis; release readiness; risk triage; cross-functional coordination; vendor and stakeholder management

Full stack web development: Next.js/React; TypeScript; Cloudflare Workers; D1; backend API validation; search metadata; aggregate page-view and retailer-click analytics

Evidence, governance, and tools: evidence review; fail-closed controls; technical research and writing; Python; Git, GitHub, and CI; contracts, budgets, and vendor records; Excel, Power Query, and Power Pivot

EDUCATION

University of North Texas - B.A., Sociology, Economics, and History

Brooklyn Law School - Coursework toward J.D., 2014-2017; degree not conferred
