PROFESSIONAL SUMMARY

Turns ambiguous problems into testable requirements, delivered software, and usable business documents. Defines scope, directs implementation and separate review, and makes acceptance decisions from evidence. Experience spans software quality, research, data analysis, and purchasing operations.

SELECTED PROJECT RESULTS

- **Delivered a Rust contribution to Tokio, approved and merged October 21, 2026.** Added conditional compilation for select! branches, resolving a feature request open since 2021 and labeled E-hard. Defined requirements, directed implementation and regression coverage, and answered maintainer review with compiler measurements. Tokio PR #8374
- **Delivered a Grafana ShortURL compatibility fix that was approved and merged.** Corrected ShortURL links to use the authenticated numeric org ID, omit it for Grafana Cloud, and preserve configured subpaths. Added table-driven Go handler regressions; issue #130873 closed on merge. Grafana PR #131070
- **Launched Cleargrain Docs and published eight downloadable public-source projects.** Produced workbooks, a research comparison, and an SOP with traceable sources, quality checks, and explicit limitations. Examples demonstrate data cleanup, supplier reporting, catalog preparation, and records analysis. Cleargrain work examples

PROFESSIONAL EXPERIENCE

Consultant - Cleargrain Docs | 2026-Present

- Define service scope, deliverables, acceptance checks, revision limits, and handover requirements for document, research, and spreadsheet work.
- Direct and verify the live review workspace using test records: private intake, scanned file exchange, versioned previews, feedback, exact-version approval, and controls withholding originals before payment.

Founder / Full Stack Web Developer / AI Evaluation & Governance - NoFuckery AI | 2026-Present

- Translate goals into specifications and failure cases; direct implementation and separate review using source changes, tests, logs, and required regression coverage.
- Co-created and released Read Shruti's three-book website using Next.js/React, TypeScript, Cloudflare Workers, and D1; own architecture, API validation, search metadata, and aggregate analytics.

Founder / Sole Operator - High Pie | October 2022-Present

- Run sourcing, supplier selection, production, pricing, inventory, fulfillment, and customer issue resolution; maintain compliance documentation for a hemp-product business.

Purchasing Coordinator - Lennar | May 2018-October 2022

- Reconciled cost and documentation discrepancies across bids, contracts, budgets, and vendor records before field execution.
- Coordinated vendors, trades, and internal stakeholders against construction deadlines and cost, quality, documentation, and compliance requirements.

CORE SKILLS

Technical project delivery: problem framing; requirements; workflow design; acceptance criteria; implementation coordination; review and release decisions

Software quality and evaluation: test strategy; end-to-end and adversarial testing; failure analysis; regression testing; AI evaluation

Research, data and documentation: source evaluation and citation; data cleanup and reconciliation; exception logging; SOPs; handoff documentation; document QA; Excel, Power Query, and Power Pivot

Technical environments: Rust; Python; TypeScript; Next.js/React; Cloudflare Workers; D1; Git/GitHub; CI

EDUCATION

University of North Texas - B.A., Sociology, Economics, and History

Brooklyn Law School - Coursework toward J.D., 2014-2017; degree not conferred

CHRIS MCNOSKY / OPEN-SOURCE CONTRIBUTION

Grafana: ShortURL fix

Technical project delivery and software quality

Approved and merged into Grafana main.

Reviewer nmarrs: "LGTM" / Merged September 25, 2026

Read the approval and public discussion

THE PROBLEM

Grafana's compatibility API could build a short link with a Kubernetes namespace, such as org-5, where its redirect logic required the numeric organization ID 5. A recipient could remain in the wrong organization and the link lookup could fail.

MY CONTRIBUTION

I directed the compatibility fix and regression coverage through upstream review. The handler now uses the authenticated numeric organization ID outside Grafana Cloud, omits the parameter for Cloud, and preserves configured application subpaths.

THE EVIDENCE

Regression tests cover the failure paths. The Go handler tests exercise the default namespace, matching and conflicting organization namespaces, Cloud with and without an organization ID, and a configured subpath.

The project accepted the change. PR #131070 received an approving review and was merged into Grafana main as commit 6a03817. The final-head check rollup had no failures, and issue #130873 closed on merge.

STATUS VERIFIED OCTOBER 16, 2026

Approved and merged upstream. The tracked compatibility issue is closed.

Tokio: cfg-gated select!

Technical project delivery and software quality

Approved and merged into Tokio upstream.

Darksonn / Approving maintainer / October 21, 2026

Read the approving review and public discussion

THE PROBLEM

Tokio is an open-source asynchronous runtime written in Rust. Its select! macro waits on multiple operations. A July 2021 request, labeled E-hard, sought conditional compilation of individual branches. Earlier attempts encountered fairness and parsing problems.

MY CONTRIBUTION

I defined behavioral requirements, directed implementation and regression coverage, and coordinated evidence-based responses to maintainer review. The Rust macro filters cfg-disabled branches before constructing storage and polling code, preserving branch-selection fairness and the existing grammar.

THE EVIDENCE

The implementation handles interacting Rust constraints. Tests cover excluded code with unavailable names, caller-context features, macro hygiene, async behavior, and the 64-branch boundary. This required coordinating conditional compilation, macro parsing, future storage, and randomized polling.

Review concerns were answered with inspectable evidence. Upstream CI passed. Compiler probes on Rust 1.88.0 and 1.98.1 found one final select! body for 10 and 64 enabled cfg branches, addressing the exponential-expansion concern. These bounded measurements do not establish zero compile-time overhead.

STATUS VERIFIED OCTOBER 21, 2026

Approved and merged as de7a96a. Issue #3974 closed on merge.
